

CUSHION CARE

Storage

Store the cushions in a cool, dark and dry place.

The cushions can tolerate the influences of the sunlight quite well. If, however, the cushions are exposed to bright sunlight for a long time, a difference in colour may occur.

Cleaning

For Olefin Fabrics:

To remove stains, sponge lightly with a mild solution of natural soap and lukewarm water.

Rinse thoroughly with fresh water.

Stubborn stains can be removed using a solution of 50ml of household bleach in 1 litre of warm water. Sponge the stain lightly or use a soft bristle brush to remove the stain. Rinse thoroughly with fresh water. Allow fabric to air dry.

DO NOT DRY CLEAN.

For Polyester Fabrics:

To remove stains, sponge lightly with a mild solution of natural soap in lukewarm water then rinse thoroughly with fresh water.

Allow fabric to air dry, out of direct sunlight. **DO NOT USE BLEACH BASED CLEANERS.**

Maintenance

Brush off dirt regularly, only do this when the fabric is dry.

Always adhere to the washing instructions mentioned on the label.

Washing by hand is preferable.

Never leave the cushions in water with a detergent for too long. Rinse the cushions thoroughly.

Do not tumble dry.

Do not iron the fabrics.
